Reference Sources: Traffic data provided by Jacobs - November 2009

Quantitative measures: Improved at 685 properties (NO2), 420 properties (PM10) - Made worse at: 379 properties (NO2), 196 properties (PM10) - No change for 546 properties (NO2), 994 properties (PM10)

Assessment scores: -55.5 (NO2) ; -8.6 (PM10)

Qualitative comments: An overall improvement. Changes, including those within Rugby AQMA, would be of minor magnitude. NO2 concentration at 1 property outside the AQMA, close to M1, would exceed the AQS objective both with and without the junction improvement, although it would slightly decrease with the scheme. PM10 levels would meet the objectives, both with and without the junction improvement. Both NO2 and PM10 concentrations would be reduced compared to 2007 levels, due to tighter emissions controls.
